#### **DETAILED ACTION**

#### Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 1. Claims 39-42, 50-58, 62, 64 and 65 are rejected under 35 U. S. C. 102(b) as being anticipated by Sanchez (US Pat. 5,583,067).

Regarding claims 39, 50, 54 and 55, Sanchez discloses in figs. 4f-4g a semiconductor device comprising: a semiconductor substrate (Well); a channel region formed in semiconductor substrate (Well); N+ source /drain regions 52a/52b in channel region wherein channel region is located between N+ source/drain regions 52a/52b wherein each of source and drain regions 52a/52b are provided with a titanium silicide layer 53a/53b on a surface thereof (col. 9, lines 9-28); at least first and second pinning regions 42a/42b (P- doped regions) formed in semiconductor substrate (Well) wherein first and second pinning regions 42a/42b are formed in a vicinity of a boundary between channel region and at least one of the source and drain regions 52a/52b; a gate insulating film 32 formed over the channel region; and a gate electrode 51/53c over the channel region with the gate insulating film 32 interposed therebetween, wherein first and second pinning regions 42a/42b are arranged along boundary and are of a conductivity type

(P- type) which is opposite to source and drain regions (N+- type) and wherein first and second pinning regions 42a/42b are overlapped by gate electrode 51/53c at least partly.

As for the recitation that "wherein an energy band of each of the first and second pinning regions is shifted from that of other portions of the channel region in the vicinity of the boundary between the channel region and one of the source and drain regions", it refers to an operational limitation and any such limitation must distinguish from the prior art in terms of structure rather than function, *In re Schreiber*, 128 F.3d 1473, 1477-78, 44 USPQ2d 1429, 1431-32 (Fed. Cir. 1997); See also *In re Swinehart*, 439 F.2d210, 212-13, 169 USPQ 226, 228-29 (CCPA 1971); *In re Danly*, 263, F.2d 844, 847, 120 USPQ 528, 531 (CCPA 1959).

Regarding claims 40, 51 and 56, Sanchez discloses that the first and second pinning regions 42a/42b contain an impurity at a concentration of about 1x10<sup>17</sup> atoms/cm<sup>3</sup> (col. 7, lines 29-31).

Regarding claims 41, 52 and 57, Sanchez discloses that a width of first and second pinning regions along boundary is approximately equal to the thickness of the sidewall spacers 46a/46b which is about 0.25 µm (2500Å) (col. 7, lines 55-58 and figs. 4c-4d).

Regarding claims 42, 53 and 58, Sanchez discloses that an interval between first and second pinning regions is less than 0.25 µm (col. 4, lines 15-18 and figs. 4f-4g).

2. Claims 39, 43, 50, 54, 59-65 are rejected under 35 U. S. C. 102(b) as being anticipated by Shimizu et al. (US Pat. 5,217,910, herein after Shimizu).

Art Unit: 2818

Shimizu discloses in figs. 9F a semiconductor device comprising: a semiconductor substrate 21; a channel region formed in semiconductor substrate 21; p-source/drain regions (p-doped regions) in channel region wherein channel region is located between p-source/drain regions; at least first and second pinning regions 38 (n+ -doped regions) formed in semiconductor substrate 21 wherein first and second pinning regions 38 are formed in a vicinity of a first boundary between channel region and the p-source region; at least third and fourth pinning regions 31 (n' -doped regions) formed in semiconductor substrate wherein third and fourth pinning regions 31 are formed in a vicinity of a second boundary between channel region and the p-drain region; a gate insulating film formed over the channel region; and a gate electrode 28/29 over the channel region with the gate insulating film interposed therebetween (figs. 9A-B and col. 8, line 64 through col. 9, line 6), wherein first and second pinning regions 38 are arranged along first boundary and third and fourth pinning regions 31 are arranged along second boundary, and a conductivity type of first, second, third and fourth pinning regions (n-type) are opposite to that of source and drain regions (p-type).

As for the recitation that "wherein an energy band of each of the first and second pinning regions is shifted from that of other portions of the channel region in the vicinity of the boundary between the channel region and one of the source and drain regions", it refers to an operational limitation and any such limitation must distinguish from the prior art in terms of structure rather than function, *In re Schreiber*, 128 F.3d 1473, 1477-78, 44 USPQ2d 1429, 1431-32 (Fed. Cir. 1997); See also *In re Swinehart*, 439 F.2d210, 212-13, 169 USPQ 226, 228-29 (CCPA 1971); *In re Danly*, 263, F.2d 844, 847, 120 USPQ 528, 531 (CCPA 1959).

### Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 44-49 are rejected under 35 U.S.C. 103 (a) as being unpatentable over Shimizu et al. (US Pat. 5,217,910) in view of Sanchez (US Pat. 5,583,067).

Shimizu discloses a semiconductor device as described above but fails to disclose the concentration of the first, second, third and fourth pinning region is about  $1 \times 10^{17}$  to  $5 \times 10^{19}$  atoms/cm<sup>3</sup> (claims 44 and 45); the width of first, second, third and fourth pinning regions along boundary is 0.05 to 0.3  $\mu$ m (claims 46 and 47); the interval between first and second or between third and fourth pinning regions is 0.04 to 0.6  $\mu$ m (claims 48 and 49). Sanchez discloses that the

Application/Control Number: 10/667,899 Page 6

Art Unit: 2818

first and second pinning regions 42a/42b contain an impurity at a concentration of about 1x10<sup>17</sup> atoms/cm<sup>3</sup> (col. 7, lines 29-31); a width of first and second pinning regions along boundary is about 0.25 µm (col. 7, lines 55-58 and figs. 4c-4d) and an interval between first and second pinning regions is less than 0.25 µm (col. 4, lines 15-18 and figs. 4f-4g). It appears that having a specific width/ interval and concentration of the pinning regions as claimed is prima facie obvious due to the fact that one can vary the width/ interval and concentration of the pinning regions in order to achieve a specific MOSFET device. Furthermore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the combined process of Shimizu in view of Sanchez by selecting a suitable the width/ interval and concentration, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or working ranges involves only routine skill in the art. In re Aller, 220 F.2d 454, 456, 105 USPQ 233, 235 (CCPA 1955). Moreover, as the width/ interval and concentration of the pinning regions does seem to be critical to the invention, it must be shown that any one or all of the listed materials yield an unexpected product or result. In re Margolis 228 USPO 940 (Fed. Cir. 1986); In re Kirsch 182 USPO 286 (CCPA 1974); In re Suether 181 USPQ 36 (CCPA 1974); In re Costello 178 USPQ 290 (CCPA 1973); In re Von Schickh 150 USPQ 300 (CCPA 1966); In re Sussman 60 USPQ 538 (CCPA 1944); In re Kaplan 45 USPQ 175 (CCPA 1940).

## Response to Arguments

4. Applicant's arguments with respect to claims 39-61 have been considered but are moot in view of the new ground(s) of rejection.

Application/Control Number: 10/667,899 Page 7

Art Unit: 2818

5. Applicant's arguments with respect to the pending claims have been considered but are moot in view of the new ground(s) of rejection. Although the same reference is applied (Shimizu and Sanchez), the rejections are based on a new interpretation of that reference. Therefore, the arguments presented in response to the interpretation used in the previous Office Action are no longer applicable.

#### Conclusion

- 6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, THIS ACTION IS MADE FINAL. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a). A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
- 7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to David Vu whose telephone number is (571) 272-1798. The examiner can normally be reached on Monday-Friday from 8:00am to 5:00pm. If attempt to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Matthew Smith S

Application/Control Number: 10/667,899 Page 8
